

BackEnd Testing for Milestone 3

Booking Tests

Booking Creation Tests:

- We test if creating a booking passes without calling an exception.
- We test if creating a booking in a timeslot that has been booked calls an exception.
- We test if creating a booking dated in the past calls an exception.

Get Booking Information Tests:

- We test if getting bookings for the customer, worker or admin all return the correct results.
- We test if getting past bookings return the correct result.

Booking Modification Tests:

- We test if marking a booking as done works correctly.

Cancel Booking Tests:

- We test if cancelling a booking removes it from the database.

Conclusion

In conclusion all the tests pass both in JUnit5 testing and CircleCI Maven testing which shows each function works as intended. All functionalities specified in sprint 3 have been tested and are functional.
